# Contents

<b>1</b>	<b>Geometry</b>	<b>3</b>
1.1	Computational geometry (part 1)	3
1.2	Revisiting orthocenter	4
1.3	The first look of the radical axis	5
1.4	(Regular) polygons	6
1.5	Some <i>mean</i> concepts	7
1.6	Completing the picture	8
1.7	Revisiting arcs and angles	9
1.8	Area	10
1.9	Solid geometry (part 1)	11
1.10	Computational geometry (part 2)	12
1.11	Lattice points and analytic geometry	13
1.12	Computations with the laws of sines and the cosines	14
1.13	Solid geometry (part 2)	15
1.14	Geometry computations and Heron's formula	16
1.15	Computational geometry (part 3)	17

## 1.7 Revisiting arcs and angles

1. Let  $P_1, P_2, \dots, P_n$  are evenly distributed around a circle. Determine the minimum value of  $n$ , given that there are three points  $P_i, P_j, P_k$  such that in triangle  $P_iP_jP_k$

$$(a) \angle P_i = \frac{180^\circ}{7}, \angle P_j = \frac{360^\circ}{7}, \angle P_k = \frac{720^\circ}{7} \quad (b) \angle P_i = 40^\circ, \angle P_j = 60^\circ, \angle P_k = 80^\circ$$

2. In triangle  $ABC$ , we have  $AB = 7$ ,  $AC = 8$ , and  $BC = 9$ . Point  $D$  lies on the circumcircle of triangle  $ABC$  so that ray  $AD$  bisects  $\angle BAC$ . What is the value of  $AD/CD$ ?

3. Let  $M$  and  $A$  be two given points on circle  $\omega$  with minor arc  $\widehat{MA} = 80^\circ$ . Let  $T$  and  $H$  be two moving points on the major  $\widehat{MA}$  with minor arc  $\widehat{TH} = 100^\circ$ . Diagonals of the quadrilateral  $MATH$  meet at  $P$ . As  $T$  and  $H$  moving along the arc, what is the locus of  $P$ ?

4. Distinct points  $A$  and  $B$  are on a semicircle with diameter  $MN$  and center  $C$ . Point  $P$  lies on segment  $CN$  and  $\angle CAP = \angle CBP = \alpha$  and  $\angle ACM = \beta$ . Suppose that  $A$  lies on  $\widehat{MB}$ , express  $\angle BPN$  in terms of  $\alpha$  and  $\beta$ .

5. (Continuation) Distinct points  $A$  and  $B$  are on a semicircle with diameter  $MN$  and center  $C$ . Point  $P$  lies on segment  $CN$  and  $\angle CAP = \angle CBP = \alpha$  and  $\angle ACM = \beta$ . Suppose that  $B$  lies on  $\widehat{MA}$ , express  $\angle BPN$  in terms of  $\alpha$  and  $\beta$ .
